USN-4736-1: Thunderbird vulnerabilities

Multiple security issues were discovered in Thunderbird. If a user were

tricked into opening a specially crafted website in a browsing context,

an attacker could potentially exploit these to cause a denial of service,

obtain sensitive information, or execute arbitrary code. (CVE-2020-26976,

CVE-2021-23953, CVE-2021-23954, CVE-2021-23960, CVE-2021-23964)

It was discovered that responses received during the plaintext phase of

the STARTTLS connection setup were subsequently evaluated during the

encrypted session. A person in the middle could potentially exploit this

to perform a response injection attack. (CVE-2020-15685)
