USN-4467-3: QEMU regression

USN-4467-1 fixed vulnerabilities in QEMU. The fix for CVE-2020-13754

introduced a regression in certain environments. This update fixes the problem.

We apologize for the inconvenience.

Original advisory details:

Ren Ding, Hanqing Zhao, Alexander Bulekov, and Anatoly Trosinenko

discovered that the QEMU incorrectly handled certain msi-x mmio operations.

An attacker inside a guest could possibly use this issue to cause QEMU to

crash, resulting in a denial of service. (CVE-2020-13754)
