

USN-4759-1: vulnerabilities

GLib

Krzysztof Nowak discovered that GLib incorrectly handled certain large buffers. A remote attacker could use this issue to cause applications

linked to GLib to crash, resulting in a denial of service, or possibly

execute arbitrary code. (CVE-2021-27218)

Kevin Backhouse discovered that GLib incorrectly handled certain memory

allocations. A remote attacker could use this issue to cause applications

linked to GLib to crash, resulting in a denial of service, or possibly

execute arbitrary code. (CVE-2021-27219)
