Installing NetSurf Browser on Ubuntu 18.04

The NetSurf Browser looked interesting to me. I was using a virtual machine with ArchBang Linux and I'm a sucker for a different browser. I have at least two dozen browsers installed at any one time, even though I regularly only use a few. Anyhow, ArchBang has a default of NetSurf and that piqued my interest.

NetSurf doesn't do anything special. It's just a light browser that claims to have CSS support. When I tried browsing with it, it was quite painful and it displayed sites rather poorly. Still, if you have a very old computer and want to have a browser, this may be the kind of browser you're stuck with. It is technically a browser that's lightweight and seems to have some basic CSS support.

As I said, I'm a sucker for browsers and have a bunch installed. In this case, I downloaded the source code and decided I didn't really feel like building it. So, I did the ol' 'apt-cache search netsurf' and nothing popped up. So, I went online and looked for a .deb that'd make it easy to install. It turns out to be more of a pain in the butt than you might think.

No matter… I've got you covered. Like normal, crack open your terminal with CTRL + ALT + T. Then, enter the following:

[code]
cd Downloads
mkdir netsurf
cd netsurf
wget

http://archive.ubuntu.com/ubuntu/pool/universe/n/netsurf/netsurf-common_3.6-3.2_all.deb

```
wget
http://archive.ubuntu.com/ubuntu/pool/universe/n/netsurf/netsu
rf-gtk_3.6-3.2_amd64.deb
wget
http://archive.ubuntu.com/ubuntu/pool/universe/n/netsurf/netsu
rf_3.6-3.2_all.deb
sudo apt install ./netsurf-common_3.6-3.2_all.deb
sudo apt install ./netsurf-gtk_3.6-3.2_amd64.deb
sudo apt install ./netsurf_3.6-3.2_all.deb
```

Then, assuming all goes well, you'll have a working NetSurf in your menu, under Internet if you use an Ubuntu flavor that uses menus like that.

[/code]

As 18.04 is the last official 32 bit Ubuntu, and official flavors, odds are good that many people will be looking for a lightweight browser to go with it. This isn't a very good browser — but it's a working browser, and a browser that doesn't take a lot of resources to run. Don't expect too much from it and you won't be too let down.

You're probably better off taking the performance hit and running Vivaldi.
